To view citing articles in Google Scholar, search a given work by title (or use other search options):

If the work was cited by others, you will see a "Cited by" link at the bottom of the record:

To view the articles that cited this work, follow link 'Cited by'.

---

If you are interested in finding out how many times a particular work has been cited, you can use the "Times Cited" feature. This can help you gauge the impact of a work within its field. To access this feature, you can use a search engine like Google Scholar. For example, searching for "Molecular mechanisms of cardiovascular disease in OSAHS: the oxidative stress link" will provide you with a list of articles that have cited this work, along with the number of times it has been cited. This can be useful for understanding the influence of a work in the academic community.
To view the articles that cited this in Web of Science, click ‘Web of Science’ button at the bottom of the record:
To be noticed when other documents cite a given work, create citation alert.

To create alert, go to the list of citing articles and click ‘Create Alert’:

Enter your e-mail address and click ‘Create Alert’:

Confirm your requested alert by the link in the verification email.
