To find H-index of an author on Google Scholar, log on with your Google account and select ‘My Citations’ at the top of the Scholar homepage:

There are two ways to find H-index of the author:

1. FROM YOUR OWN PROFILE

Type last name and initials of the author and click ‘Search Authors’ (note: Google Scholar provides an H-index only for researchers who created a user profile for themselves):
The following screen displays H-index of the author, according to the items indexed within Google Scholar:
2. **By ‘Advanced Search’**

Go to ‘Advanced Search’:

Type full name or last name and initials of the author in the ‘Return articles authored by’ field and click ‘Search’.
Click the name of the author:

The following screen displays H-index of the author:
